

تفاوت

illness, sickness و disease

Somebody asked,

یکی پرسید

“What are the differences between

فرق بین

illness, sickness and disease?”

illness, sickness و disease چیه؟

To answer this question

برای پاسخ به این سوال

take a look at this saying,

به این گفته یه نگاهی بندازید

and you'll learn everything you need:

و هر چیزی که نیازه رو یاد میگیرید:

"A patient goes to the doctor with an illness

یه مریض با ناخوشی و کسالت میره دکتر

and goes home with a disease."

و با یه بیماری میره خونه.

Illness is a condition you have,

Illness وضعیت سلامتیته

and a doctor hasn't diagnosed it.

و دکتر تشخیصش نداده.

Usually, illness doesn't have a name.

معمولا illness اسم نداره

Maybe you have a temperature,

ممکنه تب داشته باشی

and you think it's the corona,

و فکر کنی کروناست.

but it's just a cold.

ولی فقط یه سرماخوردگی باشه.

So you have an illness.

پس illness (کسالت) داری.

You go to a doctor,

میری دکتر

the doctor says you have the corona,

دکتر میگه کرونا داری

now since you know your condition,

حالا چون وضعیت سلامتیت رو میدونی

we can call it a disease.

میتونیم بهش بگیم disease.

God bless you.

خدا شفات بده.

And the last one is sickness.

و آخری sickness هست.

Which is a condition a society may give you.

که وضعیته که ممکنه جامعه بهت تحمیل کنه.

You can feel sick

میتونی مریض (sick) باشی

because you caught a cold.

بخاطر اینکه سرما خوردی.

And you can feel sick

و میتونی مریض (sick) باشی

because you feel crazy or whatever.

چونکه دیوونه‌ای چیزی هستی.

And to be honest,

و راستشو بخوای

you can use all of these interchangeably,

میتونی همه‌ی اینارو به جای هم به کار ببری

and nobody gives a damn about it...

و هیچ کسی هم اهمیت نمیده...

Don't forget to save this post

یادت نره این پست رو ذخیره کنی

and share it with your friends

و با دوستات به اشتراک بذاری...

cheers!

خدانگهدار!
